

Chemdeck TF

3- Component, thixotropic, non-broadcast, antiskid PU flooring system for deck coating and antiskid coatings.

Product Description

Chemdeck TF is a 3-component, high-build PU floor coating system formulated as a textured top coat for an antiskid system. It offers a unique advantage of a high-strength, aesthetically pleasing anti-skid system without the use of abrasive coarse silica sand.

Salient Features:

- Good chemical and mechanical resistance
- Easy application
- Excellent adhesion to substrate
- Glossy finish
- Seamless slip-resistant surface
- Easy to clean and maintain
- Wide range of colour options
- Slip resistance without quartz broadcast
- Variety of antiskid textures possible

Uses

- Slip-resistant coating for concrete and cement screed
- For multi-storeyed and underground car park
- For maintenance hangars and for wet process areas, e.g., the beverage and food industry
- For storage and assembly halls, maintenance workshops, garages, and loading ramps.

Product Data

| Appearance / colour: | Chemdeck TF[R] Resin: Chemdeck TF [H] Hardener: Pigment : | White viscous liquid Brown liquid Coloure paste (supplied separately not part of kit) |
|-----------------------------------|--|---|
| Storage conditions /shelf life | 12 months from date of mfg. If stored properly in undamaged seal packaging, at a temperature between 5 °C - 30 °C. It should be kept in a cool, well-ventilated area, away from heat, direct sunlight, sparks, and children. | |

Chemical Resistance

Excellent resistance is observed against distilled water, detergent solutions, alkalis, and acids.

Mechanical /Physical properties

Physical properties

| Property | Test Method | Value and Unit |
|-----------------------------|--------------------|---|
| Finish | CPI* 1001 | Anti-skid, Glossy/matt |
| Pot Life @ 30 °C | CPI 1002 | 20 minutes |
| Surface Dry | CPI 1002 | 2 hours |
| Skid Resistance (ASTM E303) | (ASTM E303) | 48 |
| | | |
| Elongation at break | ASTM D 638 | 30-40% |
| Pull off Adhesion test | ASTM D 4541 | Concrete Failure @ 18 Kg/cm2 |
| Abrasion Resistance[Taber] | ADTM D 4060 | 50 mg loss |
| Compressive strength | ASTM D 695 | >500 kg/cm2 |
| Flexural Strength | ASTM C580 | >150 kg/cm2 |
| Tensile strength | ASTM D638 | >200 kg/cm2 |
| Shore Hardness | ASTM D2240 | Shore D 75-85 |
| Shelf Life | - | 12 months in original unopened Container when stored between 5- 40 °C |
| | | |

Method of Application

All Chemsol Products are recommended to be applied only by Approved Applicators and should be used after using proper PPE's like Gloves, mask, goggles, etc.

Substrate Quality

The CDS (clean, dry, sound) test must be conducted before the application of primer to the concrete substrate. The substrate must be free of all contaminants such as dirt, oil, grease, coatings, and surface treatments, etc. If in doubt, apply a test area first.

Application conditions

Substrate temperature: 10-40 °C

Substrate moisture content: - <5%

Relative humidity: 80%max

Note: The substrate temperature must be at least 30C above the prevalent dew point temperature to reduce chances of condensation on the floor.

Priming

The concrete surface, after proper and thorough surface preparation, has to be primed with an appropriate primer like Chembase 150/160. After priming, allow the surface to cure for 4-5 hours. Depending on the condition of the surface, an additional layer of Epoxy screed/ Epoxy Putty with chembase 150/160 and graded sand may be required to level out the surface undulations before application of the Topcoat of chemdeck TF.

Application of Chemdeck TF coat

Ensure that the underlying coat is thoroughly cured and is dust-free. Add pigment paste to the resin part and Stir mechanically for 1 minute in order to disperse the pigments into the resin uniformly. Now add hardener and continue stirring for a further 2 minutes with a motorized helical paint stirrer until a uniform mix has been obtained. Once mixed material should be used within its specified pot life; the material is to be applied in a single coat application onto the primed surface/ epoxy screed. Spread material evenly using a notch trowel (0.5 mm Notch) and roll it evenly with a special "chemsol textured roller" within 10-15 min. to obtain the desired finish.

Curing Schedule

Vehicular movement on Chemdeck TF should be allowed ideally after 3 days of application, depending upon the ambient temperature & humidity. This is a fast-curing system. Refer to the following table to know how quickly the floor can be brought to service

| Temp.(deg C) | Foot traffic | Full cure |
|--------------|--------------|-----------|
| 10°C | 24 hours | 120 hours |
| 20°C | 12 hours | 72 hours |
| 30°C | 8 hours | 72 hours |
| | | |

Cleaning of Tools

Clean all tools and application equipment with thinner PT 36 immediately after use. Hardened and/or cured material can only be removed mechanically.

Coverage

Pre weighed kit to cover 13-16 sqm/kit 0at 500 micron thickness

Handling & Safety

Keep the containers tightly sealed when not in use. Avoid skin contact and inhalation of fumes (if any). While spraying, it is advised to wear a mask. If it comes in contact with the body, wash affected parts with plenty of soap and water. In case of persistent irritation, contact a physician.
